

## Dr Gianluca Tamagno

---

I graduated at University of Genoa (Italy) and had my specialist training at University Hospital of Padua (Italy) and INSERM - Paris (France) before moving to University Hospital of Liège (Belgium) as Fellow in Endocrinology. I was appointed Lecturer in Endocrinology at St Vincent's University Hospital – University College Dublin (Ireland) in 2007. Later, I moved to University Hospital of Marburg (Germany) as Consultant in Endocrinology. I subsequently came back to Dublin in 2013 as Consultant in Internal Medicine and Endocrinology. I worked at St Columcille's Hospital, Mater Misericordiae University Hospital, and now at Wexford General Hospital. Since my return to Ireland, I kept my cooperation and activities with University College Dublin on.

I am an internist with a well-established expertise in neuroendocrinology. My main clinical and research interests include gastroenteropancreatic/pulmonary neuroendocrine tumors and hypothalamic/pituitary disorders.

I am author of numerous publications in international journals, mostly in the field of neuroendocrinology. I have been speaker/chairman at many scientific conferences. I am member of the editorial board of international journals and I am editor of a book on pituitary adenomas on behalf of the European Neuroendocrine Association Young Researcher Committee (EYRC) which is currently in preparation.

I am a longstanding member of ENEA. I was a member of EYRC since its setting in 2012 and I served as EYRC Coordinator from 2014 to 2018.

I hope to have the possibility to serve ENEA within the ExCo following on my recent experience as EYRC Coordinator. My vision is to keep promoting clinical and research excellence and education in the field of neuroendocrinology, especially among young physicians/researchers, and to help and develop a defined professional figure of “neuroendocrinologist”, ideally including a deep expertise in both gastroenteropancreatic/pulmonary neuroendocrine tumors and hypothalamic/pituitary disorders.
